Energize your data with the next generation of DoseTrac® Enterprise Infusion Management Software

BETHLEHEM, PA – As a leader in smart infusion therapy, B. Braun Medical Inc. (B. Braun) announced today the arrival of the next generation of infusion management software. With DoseTrac® Enterprise Infusion Management Software, organizations receive a mix of real-time views and retrospective reporting features to better understand their infusion pump fleet and associated data. This new software platform can connect 1 to 40,000 pumps at an unlimited number of facilities to just one application.

“We are delighted to introduce our DoseTrac® Enterprise Infusion Management Software, which can transform the way healthcare organizations manage their infusion pumps and data,” said Jonathan Stapley, Senior Director of Marketing, Active Devices. “DoseTrac® Enterprise allows users to manage their infusion pumps from a single central server location regardless of the size of their fleet or number of locations. Pumps can move between locations seamlessly and data can be easily aggregated and disaggregated from the enterprise level down to the individual facility care area to power continuous quality improvement.

“We believe this software represents a significant leap forward in infusion management, and we can't wait to see the positive impact it has on reducing the investment in clinical IT infrastructure required for infusion pumps and improving data management,” said Stapley.

By using analysis and targeted interventions, B. Braun has helped hospitals reach significant results including 100% drug library compliance, 100% auto-programming compliance and 99% fewer alerts.^{1,2} In addition, DoseTrac® Enterprise Infusion Management Software can be used on desktop computers, tablets and smartphones.
